Editorial

Jayanth S. Sampath FRCSEd (Tr & Orth)[1]

It is a pleasure to publish the last issue of International Journal of Paediatric Orthopaedics (IJPO) for 2025 with interesting articles and case reports of relevance to the practising orthopaedic surgeon. It is heartening to see that the journal receives regular submissions from institutions across the globe. While the previous issue carried a review of paediatric anterior cruciate ligament injuries, this issue brings you an epidemiological study of fracture patterns from Yemen. Articles from institutions from differing geographical regions and the diverse pathologies that they describe point to IJPO becoming a preferred destination for articles relating to all aspects of paediatric orthopaedics. The renewed efforts of successive editorial boards in promoting the journal appear to be bearing fruit.

This issue contains the previously mentioned study from Sana'a city, a truly laudable effort by the authors in collecting epidemiological data over an extended period of time. A case report from Ganga Hospital by Dr Venkatadass and colleagues describes the myriad problems encountered in the management of osteogenesis imperfecta. Further reports include rare causes of foot pain in children and uncommon clinical scenarios in the hip. A case report on the management of a neglected convergent dislocation of the elbow in a child highlights the difficulties in managing paediatric trauma in the developing world. Please do share the articles with your trainees and fellows. IJPO issues are easily downloadable free of charge and in full-text format from our website www.ijpoonline.com

We invite your suggestions and comments for any improvements to the journal. Kindly write to us editor.ijpo@gmail.com

It is my pleasure to acknowledge the contributions of authors, reviewers, editors, and the backend team who have been instrumental in bringing out this issue.

Sincerely
Dr Jayanth S Sampath
Editor, International Journal of Paediatric Orthopaedics
